

Protecting the Protectors

Laundry solutions for the
emergency services

Our commitment to firefighters' well-being

Their uniform is their shield - but if it's not cleaned properly dangerous toxins can build up inside the layers and threaten the firefighter's health.

Electrolux Professional develops reliable solutions to remove most residual toxins, far surpassing market expectations.

Process Control

International standards recommend protecting your fire brigades by washing PPE and uniforms after each and every fire (ISO 23616).

Monitor your equipment status and performance. You can export wash history to a spreadsheet for easy auditing and to verify if the machines and cycles used comply with legal standards.

Peace of mind

with maximum quality and hygiene control

High efficiency

with unique programs and accessories

Maximum flexibility

with uniquely designed machines and special programs for everything from workout clothes to helmets, masks and boots.

Best utility cost optimisation

thanks to the Automatic Saving System for washers and faster drying processes.

We are member of CTIF

working to better understand and continuously improve the working conditions for firefighters through ongoing dialogue, analysis and sharing of lessons learned from incidents, accidents and fires throughout the world.

Round-the-clock Protection

1
Alarm received - when the alarm sounds, all equipment is ready - clean and safe - for action!

2
On site - Dangerous particle contamination

3
Remove the safety equipment on site after operations. Place the safety equipment into soluble bags for the washing process.

4
 When you come back to the station bring the laundry bags into the **DIRTY ZONE**.

Fill the Barrier Washers (or Front-Loaded Washers) with the uniforms and start the program.

Then, place the personal protective equipment inside the PPE Washer for the best decontamination results.

5
 The Barrier Concept acts as a protective shield: the contaminated items are completely separated from the **CLEAN ZONE**.

When the washing cycle is completed, take out the clean and re-impregnated safety equipment and dry them in a special designed **Drying Cabinet** (or Tumble Dryer).

6
 Now the safety equipment is ready for the next call-out

Optimize your cleaning process

Whether you require specialized cleaning of Personal Protective Equipment or the laundering of workout gear, our wide range of washing solutions and programs provides targeted results.

Put your safety in the hands of experts

Our decontamination system significantly reduces the dangerous health risks posed by exposure to carcinogens and other toxic substances. Effective decontamination also helps preserve the protective integrity of PPE fabrics, safeguarding your team day after day.

The ideal couple!

► Barrier Washers

Take total control of contamination in sensitive laundry environments. Line 6000 Barrier Washers provide a physical barrier between dirty and clean laundry zones and sit flush with the wall for easy cleaning.

► Drying Cabinets

Reliable drying results with specially designed airing hangers that facilitate the flow of air. Warm air is blown first through the hangers straight into the garment and then around the outside.

This unique feature ensures that the wash programme is brought to completion before allowing the washer to be unloaded on the clean side.

When hygiene is critical, consistent practice and discipline are a must: the dirty linen is loaded on one side and the clean linen is unloaded from another door opening into a separate room, giving functional separation

► **Washers**

High productivity front-load washers designed to make laundry operations safe, fast and cost controlled - Built for people and the planet.

It weighs the load and adjusts the water intake based on that. This saves water, energy and money.

► **Tumble Dryers**

The programs used by our high efficiency tumble dryers re-activate the impregnated layer and keeps firefighting kits fit for purpose for the maximum protection time.

ClarusVibe control, the newest of the interfaces, guarantees an intuitive experience and smooth interaction, providing a **smart and effortless way to manage the wash process.**

**But it's not only about the uniforms!
What about cleaning equipment and respiratory protecting devices?**

► **PPE-L**
Personal Protective Equipment washer - large

► **PPE-UC**
Personal Protective Equipment undercounter washer

This special solution washes personal protective equipments in steel, composite, rubber, fabric, plastic etc. from oily substances, residue of combustion gases, toxins and other highly hazardous substances

Helmets

Masks

SCBA - self contained breathing apparatus

Whatever the size of your station

Big Fire station

8 - 10 PPE sets

Washer	2 x 27 kg (WB6-27/WH6-27)
PPE Washer	2 x PPE-L
Drying cabinet	2 x DC6-15
Drying cabinet for various fire equipment	DC6-8
Tumble Dryer	1 x TD6-20

Medium Fire station

4 - 5 PPE sets

Washer	27 kg (WB6-27/WH6-27)
PPE Washer	1 x PPE-L
Drying cabinet	DC6-15
Drying cabinet for various fire equipment	DC6-8
Tumble Dryer	1 x TD6-14

Small Fire station

2 - 3 PPE sets

Washer	14 kg (WH6-14)
PPE Washer	1 x PPE-UC
Drying cabinet	DC6-15
Drying cabinet for various fire equipment	-
Tumble Dryer	1 x TD6-7

An inspirational story

Dresden Fire Department, Germany

The Dresden Fire Department is a large fire department with over **500 team members** on duty at the professional fire department and a further **650 volunteer team members** at the district fire departments.

In 2021, 774 fire calls and 6,097 calls for assistance/ABC were made.

Due to the constantly increasing number of operations, **a new, more efficient laundry had to be created in Dresden according to the latest requirements.**

For this reason, existing buildings in Dresden, including a vehicle hall, were converted.

The space concept therefore had to be integrated into the existing rooms.

Due to the size of the professional fire department, **2 Barrier Washers (WB6-27) were used.**

Thus, the personal protective equipment (PPE) laundry in Dresden meets the current requirements in terms of **hygiene.** Through practical planning, all connections were perfectly prepared on site, so that the installation could be completed quickly.

For the Dresden Fire Department, it is important to ensure process reliability around a hygienic and sustainable complete solution

During all operations, the firefighters wear special PPE to avert danger to life and limb of the rescue workers. **During each operation, the PPE is stressed and must be reconditioned as quickly as possible** in order to ensure the full protection of the staff again during the next operation.

Process safety includes **clearly defined washing programs** in which the detergents are dosed fully automatically. Since Line 6000 Washers have the **Integrated Savings feature** with load cells, the detergent is precisely dosed to the actual load weight.

This is very important for both hygienic washing and reimpregnation. Both underdosing and overdosing, are effectively prevented.

List of equipment

- 2 x WB6-27 Barrier washer
- 1 x WH6-27 Clarus Vibe washer
- 3 x DC6-15 Drying Cabinet

Excellence is central to everything we do.
By anticipating our customers' needs, we strive for
Excellence with our people, innovations, solutions and services.
To be the OnE making our customers' work-life easier,
more profitable – and truly sustainable every day.
