The installation, use and maintenance manual (hereinafter Manual) provides the user with information necessary for correct and safe use of the appliance.

The following must not be considered a long and exacting list of warnings, but rather a set of instructions suitable for improving appliance performance in every respect and, above all, preventing injury to persons and animals and damage to property due to improper operating procedures.

All persons involved in appliance transport, installation, commissioning, use and maintenance, repair and disassembly must consult and carefully read this manual before carrying out the various operations, in order to avoid wrong and improper actions that could compromise the appliance's integrity or endanger people. Make sure to periodically inform the user regarding the safety regulations. It is also important to instruct and update personnel authorised to operate on the appliance, regarding its use and maintenance.

The manual must be available to operators and carefully kept in the place where the appliance is used, so that it is always at hand for consultation in case of doubts or whenever required.

If, after reading this manual, there are still doubts regarding appliance use, do not hesitate to contact the Manufacturer or the authorised Service Centre to receive prompt and precise assistance for better operation and maximum efficiency of the appliance. During all stages of appliance use, always respect the current regulations on safety, work hygiene and environmental protection. It is the user's responsibility to make sure the appliance is started and operated only in optimum conditions of safety for people, animals and property.

IMPORTANT

- The manufacturer declines any liability for operations carried out on the appliance without respecting the instructions given in this manual.
- The manufacturer reserves the right to modify the appliances presented in this publication without notice.
- No part of this manual may be reproduced.
- This manual is available in digital format by:
 - contacting the dealer or reference customer care;
 - downloading the latest and up to date manual on the web site www.electroluxprofessional.com;
- The manual must always be kept in an easily accessed place near the appliance. Appliance operators and maintenance personnel must be able to easily find and consult it at any time.

A WARNING AND SAFETY INFORMATION

A.1 General information

To ensure safe use of the appliance and a proper understanding of the manual it is necessary to be familiar with the terms and typographical conventions used in the documentation. The following symbols are used in the manual to indicate and identify the various types of hazards:

WARNING

Danger for the health and safety of operators.

WARNING

Danger of electrocution - dangerous voltage.

CAUTION

Risk of damage to the appliance or the product.

IMPORTANT

Important instructions or information on the product

Equipotentiality

Read the instructions before using the appliance

Clarifications and explanations

- Only specialised personnel are authorised to operate on the appliance.
- This appliance is to be intended for commercial and collective use, for example in kitchens of restaurants, canteens, hospitals and in commercial enterprises such as bakeries, butcheries, etc., not for continuous mass production of food. Any other use is deemed improper.
- This appliance is intended to be used in professional areas (eg. bar, canteen, etc) by an operator for normal machine user.
- This appliance must not be used by minors and adults with limited physical, sensory or mental abilities or without adequate experience and knowledge regarding its use.
- Do not let children play with the appliance.
- Keep all packaging and detergents away from children.
- Cleaning and user maintenance shall not be made by children without supervision.
- For your safety do not store or use gasoline or other flammable materials, vapours and liquids in the vicinity of this or any other appliance.
- Do not store explosive substances, such as pressurized containers with flammable propellant, in this appliance.
- Refer to the data given on the appliance's data plate for relations with the Manufacturer (e.g. when ordering spare parts, etc.).
- When scrapping the appliance, the marking CE must be destroyed.
- Save these instructions carefully for further consultation by the various operators.

A.2 Personal protection equipment

Summary table of the Personal Protection Equipment (PPE) to be used during the various stages of the appliance's service life.

Stage	Protective garments 	Safety footwear 	Gloves 	Glasses 	Safety helmet 
Transport	—	●	○	—	○
Handling	—	●	○	—	—
Unpacking	—	●	○	—	—
Installation	—	●	● ¹	—	—
Normal use	●	●	● ²	—	—
Adjustments	○	●	—	—	—
Routine cleaning	○	●	● ¹⁻³	○	—
Extraordinary cleaning	○	●	● ¹⁻³	○	—
Maintenance	○	●	○	—	—
Dismantling	○	●	○	○	—
Scrapping	○	●	○	○	—
Key:					
●	PPE REQUIRED				
○	PPE AVAILABLE OR TO BE USED IF NECESSARY				
—	PPE NOT REQUIRED				

1. During these operations, gloves must be cut-resistant. Failure to use the personal protection equipment by operators, specialized personnel or users can involve exposure to harm to health (depending on the model).

2. During these operations, gloves must be heatproof to protect hands from contact with hot food or hot parts of the appliance and/or when removing hot items from it. Failure to use the personal protection equipment by operators, specialised personnel or users can involve exposure to chemical risk and cause possible harm to health (depending on the model).

3. During these operations, gloves must be suitable for contact with chemical substances used (refer to the safety data sheet of the substances used for information regarding the required PPE). Failure to use the personal protection equipment by operators, specialized personnel or users can involve exposure to chemical risk and cause possible harm to health (depending on the model).

A.3 General safety

- The appliances are provided with electric and/or mechanical safety devices for protecting workers and the appliance itself.
- Never operate the appliance, removing, modifying or tampering with the guards, protection or safety devices.
- Do not make any modifications to the parts supplied with the appliance.
- Several illustrations in the manual show the appliance, or parts of it, without guards or with guards removed. This is purely for explanatory purposes. Do not use the appliance without the guards or with the protection devices deactivated.

Disconnect the appliance from the power supply before carrying out any installation, assembly, cleaning or maintenance procedure.

- Do not remove, tamper with or make illegible the CE marking, the safety, danger and instruction signs and labels on the appliance.
- Air recirculation must take into account the air necessary for combustion, 2 m³/h/kW of gas power, and also the “well-being” of persons working in the kitchen.
- Inadequate ventilation causes asphyxia. Do not obstruct the ventilation system in the place where this appliance is installed. Do not obstruct the vents or ducts of this or other appliances.
- The A-weighted emission sound pressure level does not exceed 70 dB(A).
- Do not use products (even if diluted) containing chlorine (sodium hypochlorite, hydrochloric or muriatic acid, etc.) to clean the appliance or the floor under it.
- Do not spray aerosols in the vicinity of this appliance while it is in operation.
- Never check for leaks with an open flame.
- Install the appliance under conditions of adequate ventilation in order to provide a suitable air change per hour. Make sure that the ventilation system, whatever it is, always remains operational and efficient for the entire period of time during which the equipment is operating.
- Do not obstruct the flow of combustion and ventilation air.
- The following operations have to be carried out by specialised authorised personnel or Customer Care Service provided with all the appropriate personal protection equipment (*A.2 Personal protection equipment*), tools, utensils and ancillary means, who can ask the manufacturer to supply a servicing manual:
 - Installation and assembly
 - Positioning
 - Electrical connection
 - Appliance cleaning, repair and extraordinary maintenance
 - Appliance disposal
 - Work on electrical equipment

A.4 Protection devices installed on the appliance

Guards

The appliance has:

- fixed guards (e.g. casings, covers, side panels, etc.), fixed to the appliance and/or frame with screws or quick-release connectors that can only be removed or opened with tools; therefore the user must not remove or tamper with such devices. The Manufacturer declines any liability for damage due to tampering or their non-use;
- interlocked movable guards (door) for access inside the appliance;
- appliance electrical equipment access panels or doors, made from hinged panels openable with tools. The panel or the door must not be opened when the appliance is connected to the power supply.

A.5 Safety signs to be placed on the appliance or near its area

Prohibition	Meaning
	do not remove the safety devices
	do not use water to extinguish fires (placed on electrical parts)
	Keep the area around the appliance clear and free from combustible materials. Do not keep flammable materials in the vicinity of the appliance

Danger	Meaning
	caution hot surface
	danger of electrocution (shown on electrical parts with indication of voltage)

A.6 Reasonably foreseeable improper use

Improper use is any use different from that specified in this manual. During appliance operation, other types of work or activities deemed improper and that in general can involve risks for the safety of operators and damage to the appliance are not allowed. Reasonably foreseeable improper use includes:

- lack of appliance maintenance, cleaning and periodical checks;
- structural changes or modifications to the operating logic;
- tampering with the guards or safety devices;
- failure to use personal protection equipment by operators, specialised personnel and maintenance personnel;
- failure to use suitable accessories (e.g. use of unsuitable equipment or ladders);
- keeping combustible or flammable materials, or in any case materials not compatible with or pertinent to the work, near the appliance;
- wrong appliance installation;
- placing in the appliance any objects or things not compatible with its use, or that can damage the appliance, cause injury or pollute the environment;
- climbing on the appliance;
- non-compliance with the requirements for correct appliance use;
- other actions that give rise to risks not eliminable by the Manufacturer.

A.7 Residual risks

The appliance has several risks that were not completely eliminated from a design standpoint or with the installation of adequate protection devices. Nevertheless, through this manual the Manufacturer has taken steps to inform operators of such risks, carefully indicating the personal protection equipment to be used by them. In order to reduce the risks, provide for sufficient spaces while installing the unit.

To preserve these conditions, the areas around the appliance must always be:

- kept free of obstacles (e.g. ladders, tools, containers, boxes, etc.);
- clean and dry;
- well lit.

For the Customer's complete information, the residual risks remaining on the appliance are indicated below: such actions are deemed improper and therefore strictly forbidden.

Residual risk	Description of hazardous situation
Slipping or falling	The operator can slip due to water, any liquid or dirt on the floor
Burns/abrasions (e.g. heating elements, cold pan, cooling circuit plates and pipes)	The operator deliberately or unintentionally touches some components inside the appliance without using protective gloves.
Electrocution	Contact with live parts during maintenance operations carried out with the electrical panel powered
Crushing or injury	The specialised personnel may not correctly fix the control panel when accessing the technical compartment. The panel could close suddenly.
Tipping of loads	When handling the appliance or the packing containing it, using unsuitable lifting systems or accessories or with the unbalanced load
Chemical	Contact with chemical substances (e.g. detergent, rinse aid, scale remover, etc.) without taking adequate safety precautions. Therefore always refer to the safety cards and labels on the products used.
Sudden closure	The operator for normal appliance use could suddenly and deliberately close the lid/door/oven door (if present, depending on the appliance type).

A.8 Transport, handling and storage

- Transport (i.e. transfer of the appliance from one place to another) and handling (i.e. transfer inside workplaces) must occur with the use of special and adequate means.
- Please refer to indications on packaging for stackability during transport, handling and storage.
- Do not stand under suspended loads during loading or unloading operations. Unauthorized personnel must not enter the work area.
- The weight of the appliance alone is not sufficient to keep it steady.
- For appliance handling, do not lift and anchor it to movable or weak parts such as: casings, electrical raceways, pneumatic parts, etc.
- Do not push or pull the appliance to move it, as it may tip over. Use proper tool to lift the appliance.
- Arrange a suitable area with flat floor for appliance unloading and storage operations.
- Appliance transport, handling, shifting and storage personnel must be adequately instructed and trained regarding the safely use of lifting systems and personal protection equipment suitable for the type of operation carried out.
- When removing the anchoring systems, make sure the stability of the appliance parts does not depend on the anchoring and, therefore, that this operation does not cause the

load to fall off the vehicle. Before unloading the appliance components, make sure all the anchoring systems are removed.

A.9 Installation and assembly

- The operations described must be carried out in compliance with the current safety regulations and provisions in force in the country of use.
- The plug, if present, must be accessible after positioning the appliance in the place of installation.
- When installing the appliance, make sure gas set and pressure is carried out in compliance with that specified on the data plate.
- The appliance is not suitable for installation outdoors and/or in places exposed to atmospheric agents (rain, direct sunlight, etc.).

A.10 Electrical connection

- The power supply system must be suitable for the rated current of the connected appliance; the connection must be carried out in compliance with the regulations and provisions in force in the country of use.
- The information regarding the appliance power supply voltage and frequency is given on the data plate.
- Install between the power cable and the electric line a differential thermal-magnetic switch suitable for the absorption specified on the data plate, with contact gap enabling complete disconnection in category III overvoltage conditions and complying with the regulations in force.
- If the power cable is damaged or too short, it must be replaced by the Customer Care Service or in any case by specialised personnel, in order to prevent any risk.
- The manufacturer declines any liability for damage or injury resulting from breach of the above rules or non-compliance with the electrical safety regulations in force in the country where the appliance is used.
- Verify that a safety circuit breaker is installed between the power cable of the appliance and the mains electric line. The contact opening max. distance and leakage current must comply with the local safety regulations.
- If present, connected the appliance to the equipotential protection circuit .

A.11 Positioning

- Install the appliances, taking all the safety precautions required for this type of operation, also respecting the relevant fire-prevention measures.
- Prevent the areas where the appliance is installed to be polluted with corrosive substances (chlorine, etc.). The manufacturer declines any liability for corrosive effects due to external causes.
- The appliance can be installed separately or combined only with other appliances of the same range.

A.12 Appliance space limitations

- The appliances are not suitable for recess-mounting. Leave a space of at least 100 between the appliance and side walls and 100 from the rear wall, or in any case an adequate space to enable subsequent servicing or maintenance operations.
- Maintain a distance of at least 250 mm between the appliance and any combustible walls.

A.13 Appliance cleaning

- Do not touch the appliance with wet hands or feet or when barefoot.

- Put the appliance in safe conditions before starting any cleaning operation.
- Do not allow oil or grease to come into contact with plastic parts. Do not allow dirt, fat, food or other residuals to form deposits on the appliance.
- Respect the requirements for the various routine and extraordinary maintenance operations. Non-compliance with the instructions can create risks for personnel.
- Do not spray water or use water jets, steam cleaner or high pressure cleaner.

A.14 Preventive Maintenance

In order to ensure the safety and performance of your equipment, it is recommended that service is undertaken by Electrolux Professional SpA authorised engineers every 12 months, in accordance with Electrolux Professional SpA Service Manuals. Please contact your local Electrolux Professional SpA Service Centre for further details.

A.15 Parts and accessories

Use only original accessories and/or spare parts. Failure to use original accessories and/or spare parts will invalidate the original manufacturer warranty and may render the appliance not compliant with the safety standard.

A.16 Precautions for use and maintenance

- Risks mainly of a mechanical, thermal and electrical nature exist in the appliance. Where possible the risks have been neutralised:
 - directly, by means of adequate design solutions.
 - indirectly by using guards, protection and safety devices.
- Any anomalous situations are signalled on the control panel display.
- During maintenance several risks remain, as these could not be eliminated, and must be neutralised by adopting specific measures and precautions.
- Do not carry out any checking, cleaning, repair or maintenance operations on moving parts. Workers must be informed of this prohibition by means of clearly visible signs.
- Make sure to periodically check correct operation of all the safety devices and the insulation of electrical cables, which must be replaced if damaged.

In case of a significant anomaly (e.g. short circuits, wires coming out of the terminal block, motor breakdowns, worn electrical cable sheathing, etc.) the operator for normal appliance use must:

- immediately deactivate the appliance and disconnect all the supplies (electricity, gas, water).

A.17 Appliance maintenance

- The inspection and maintenance intervals depend on the actual appliance operating conditions and ambient conditions (presence of dust, damp, etc.), therefore precise time intervals cannot be given. In any case, careful and periodical appliance maintenance is advisable in order to minimise service interruptions.
- It is advisable to stipulate a preventive and scheduled maintenance contract with the Customer Care Service.
- Put the appliance in safe conditions before starting any maintenance operation.
- To guarantee appliance efficiency and correct operation, periodical maintenance must be carried out according to the instructions given in the manual.

A.18 Appliance disposal

- Make the appliance unusable by removing the power cable and any compartment closing devices, to prevent the possibility of someone becoming trapped inside.

B WARRANTY TERMS AND EXCLUSIONS

If the purchase of this product includes warranty coverage, warranty is provided in line with local regulations and subject to the product being installed and used for the purposes as designed, and as described within the appropriate equipment documentation.

Warranty will be applicable where the customer has used only genuine spare parts and has performed maintenance in accordance with Electrolux Professional user and maintenance documentation made available in paper or electronic format.

Electrolux Professional strongly recommends using Electrolux Professional approved cleaning, rinse and descaling agents to obtain optimal results and maintain product efficiency over time.

The Electrolux Professional warranty does not cover:

- service trips cost to deliver and pick up the product;
- installation;
- training on how to use/operate;
- replacement (and/or supply) of wear and tear parts unless resulting from defects in materials or workmanship reported within one (1) week from the failure;
- correction of external wiring;
- correction of unauthorized repairs as well as any damages, failures and inefficiencies caused by and/or resulting from:
 - insufficient and/or abnormal capacity of the electrical systems (current/voltage/frequency, including spikes and/or outages);
 - inadequate or interrupted water supply, steam, air, gas (including impurities and/or other that does not comply with the technical requirements for each appliance);
 - plumbing parts, components or consumable cleaning products that are not approved by the manufacturer;

- customer's negligence, misuse, abuse and/or non-compliance with the use and care instructions detailed within the appropriate equipment documentation;
- improper or poor: installation, repair, maintenance (including tampering, modifications and repairs carried out by third parties not authorized) and modification of safety systems;
- Use of non-original components (e. g.: consumables, wear and tear, or spare parts);
- environment conditions provoking thermal (e. g. overheating/freezing) or chemical (e. g. corrosion/oxidation) stress;
- foreign objects placed in- or connected to- the product;
- accidents or force majeure;
- transportation and handling, including scratches, dents, chips, and/or other damage to the finish of the product, unless such damage results from defects in materials or workmanship and is reported within one (1) week of delivery unless otherwise agreed;
- product with original serial numbers that have been removed, altered or cannot be readily determined;
- replacement of light bulbs, filters or any consumable parts;
- any accessories and software not approved or specified by Electrolux Professional.

Electrolux Professional warranty will be void and manufacturer shall have no liability related thereto in case of any modification of the product or related hardware/software/programming.

Warranty does not include scheduled maintenance activities (including the parts required for it) or the supply of cleaning agents unless specifically covered within any local agreement, subject to local terms and conditions.

Check on Electrolux Professional website the list of authorized customer care.

C TECHNICAL DATA

C.1 Appliance and manufacturer's identification data

The data plate gives the product identification and technical data.

An example of the marking or data plate on the appliance is given below:

Electrolux Professional SpA - Viale Treviso 15 - 33170 Pordenone (Italy)		MADE IN ITALY

IMPORTANT
The pilot power is less than 0.25 kW.

IMPORTANT
For gas pressure and consumption refer to the dataplate of your appliance, or the appendix.

C.2 Dataplate position

IMPORTANT
This instruction manual contains information relevant to various appliances. See the dataplate located under the control panel to identify the appliance (see fig. below).

IMPORTANT
When installing the appliance, make sure the electrical connection is carried out in compliance with that specified on the data plate.

C.3 Gas models

TYPE	Tank capacity	Nominal heat output	Connection ISO 7/1 BS/P connection

D GENERAL INFORMATION

WARNING

Refer to “*WARNING AND Safety Information*”.

D.1 Law requirements only for Australia

This appliance shall be installed only by authorised persons and in accordance with the manufacturer’s installation instructions, local gas fitting regulations, municipal building codes, electrical wiring regulations, local water supply regulations, AS5601 - gas installation, health authorities and any other statutory regulations, and the Plumbing Code of Australia (the PCA).

D.2 Introduction

This manual contains information relevant to various appliances. The product images in this guide are only an example.

The drawings and diagrams given in the manual are not in scale. They supplement the written information with an outline, but are not intended to be a detailed representation of the appliance supplied.

The numerical values given on the appliance installation diagrams refer to measurements in millimeters and/or inches.

D.3 Intended use and restrictions

This appliance is designed for cooking food. It is intended for collective use.

Any other use is deemed improper.

NOTE!

The manufacturer declines any liability for improper use of the product.

D.4 Testing and inspection

Our appliances have been designed and optimized, with laboratory testing, in order to obtain high performance and efficiency.

Passing of the tests (visual inspection - gas/electrical test - functional test) is guaranteed and certified by the specific enclosures.

D.5 Copyright

This manual is intended solely for consultation by the operator and can only be given to third parties with the permission of Electrolux Professional SpA.

D.6 Keeping the manual

The manual must be carefully kept for the entire life of the appliance, until scrapping. The manual must stay with the appliance in case of transfer, sale, hire, granting of use or leasing.

D.7 Recipients of the manual

This manual is intended for:

- the carrier and handling personnel;
- installation and commissioning personnel;
- the employer of appliance users and the workplace manager;
- operators for normal appliance use;
- specialised personnel - Customer Care service (see service manual).

D.8 Definitions

Listed below are the definitions of the main terms used in the manual. It is advisable to read them carefully before use.

Operator	appliance installation, adjustment, use, maintenance, cleaning, repair and transport personnel.
Manufacturer	Electrolux Professional SpA or any other service centre authorised by Electrolux Professional SpA.
Operator for normal appliance use	an operator who has been informed and trained regarding the tasks and hazards involved in normal appliance use.
Customer or specialised personnel	an operator instructed/trained by the Manufacturer and who, based on his professional and specific training, experience and knowledge of the accident-prevention regulations, is able to appraise the operations to be carried out on the appliance and recognise and prevent any risks. His professionalism covers the mechanical, electromechanical and electronics fields etc.
Danger	source of possible injury or harm to health.
Hazardous situation	any situation where an operator is exposed to one or more hazards.
Risk	a combination of probabilities and risks of injury or harm to health in a hazardous situation.
Protection devices	safety measures consisting of the use of specific technical means (guards and safety devices) for protecting operators against risks.
Guard	an element of a appliance used in a specific way to provide protection by means of a physical barrier.
Safety device	a device (other than a guard) that eliminates or reduces the risk; it can be used alone or in combination with a guard.
Customer	the person who purchased the appliance and/or who manages and uses it (e. g. company, entrepreneur, firm).
Electrocution	an accidental discharge of electric current on a human body.

D.9 Responsibility

The Manufacturer declines any liability for damage and malfunctioning caused by:

- non-compliance with the instructions contained in this manual;
- repairs not carried out in a workmanlike fashion, and replacements with parts different from those specified in the spare parts catalogue (the fitting and use of non-original spare parts and accessories can negatively affect appliance

- operation and invalidates the original manufacturer warranty);
- operations carried out by non-specialised personnel;
- unauthorized modifications or operations;
- missing, lack or inadequate maintenance;
- improper appliance use;
- unforeseeable extraordinary events;
- use of the appliance by uninformed and / or untrained personnel;
- non-application of the current provisions in the country of use, concerning safety, hygiene and health in the workplace.

The Manufacturer declines any liability for damage caused by arbitrary modifications and conversions carried out by the user or the Customer.

The employer, workplace manager or service technician are responsible for identifying and choosing adequate and suitable personal protection equipment to be worn by operators, in compliance with regulations in force in the country of use.

The Manufacturer declines any liability for inaccuracies contained in the manual, if due to printing or translation errors.

Any supplements to the installation, use and maintenance manual the Customer receives from the Manufacturer will form an integral part of the manual and therefore must be kept together with it.

D.10 Customer packaging checks

- The forwarder is responsible for the goods during transport and delivery.
- Make a complaint to the forwarder in case of visible or hidden damage.
- Specify any damage or shortages on the dispatch note.
- The driver must sign the dispatch note: the forwarder can reject the claim if the dispatch note is not signed (the forwarder can provide the necessary form).
- For hidden damage or shortages becoming apparent only after unpacking, request the forwarder for inspection of the goods within and no later than 15 days after delivery.

After packaging checks

1. Remove the packaging.
Take care when unpacking and handling of the appliance to not cause any shocks on itself.
2. Keep all the documentation contained in the packaging.

D.11 Storage

The appliance and/or its parts must be stored and protected from damp, in a non-aggressive place, free of vibrations and with room temperatures between 5°C and 50°C.

The place where the appliance is stored must:

- can take the appliance load,
- have a flat support surface to avoid deforming the appliance or damage to the support feet.

E INSTALLATION AND ASSEMBLY

E.1 Introduction

WARNING

Refer to “**WARNING AND Safety Information**”.

To ensure correct operation of the appliance and maintain safe conditions during use, carefully follow the instructions given in this chapter.

Check and, if necessary, level the appliance after positioning. Incorrect levelling can cause appliance malfunctioning.

CAUTION

Keep the ventilation openings in the appliance casing or in the installation structure free of any obstructions.

CAUTION

Before moving the appliance make sure the load bearing capacity of the lifting equipment used is suitable for its weight.

E.2 Customer's responsibilities

The tasks and works required of the Customer are:

- check the floor planarity on which the appliance is placed;

- arrange an earthed power socket of suitable capacity for the input specified on the data plate;
- prearrange a high-sensitivity manual-reset magneto-thermal circuit-breaker;
- prearrange a device lockable in the open position for the connection to the power supply.
- install a rapid gas shutoff valve ahead of each individual appliance (depending on the model). Install the valve in an easily accessed place.

NOTE!
For information regarding the electrical connection, refer to "A.10 Electrical connection".

E.3 Unpacking instructions

Unpack the appliance carrying out the following operations:

- if present, cut the straps and remove the protective film, taking care not to scratch the surface if scissors or blades are used;
- if present, remove the cardboard top, the polystyrene corners and the vertical protection pieces;
- for appliances with stainless steel surfaces, remove the protective film very slowly without tearing it, to avoid leaving glue stuck to the surface;
- should this happen, remove the traces of glue with a non-corrosive solvent, rinsing it off and drying thoroughly;
- it is advisable to go over all the stainless steel surfaces with a rag soaked in paraffin oil in order to create a protective film.

E.4 Disposal of packing

The packing must be disposed of in compliance with the current regulations in the country where the appliance is used. All the packing materials are environmentally friendly.

They can be safely kept, recycled, or burned in an appropriate waste incineration plant. Recyclable plastic parts are marked as follows:

 PE	Polyethylene <ul style="list-style-type: none"> • Outer wrapping • Instructions bag
 PP	Polypropylene <ul style="list-style-type: none"> • Straps
 PS	Polystyrene foam <ul style="list-style-type: none"> • Corner protectors

The parts in wood and cardboard can be disposed of, respecting the current regulations in the country where the appliance is used.

E.5 Joining Appliances

1. Undo the 4 fixing screws and remove the control panels of the appliances (Fig.1A);
2. Remove the fixing screw nearest the control panel, from each side to be joined (Fig.1B);
3. Bring the appliances together and turn the feet to level them until the tops match (Fig.1D);

4. Turn one of the two plates inside the appliances 180°C (Fig.1C);

5. From inside the control panel of the same appliance, join them at the front side, screwing one M5x40 Hex Head screw (supplied) on the opposite insert (Fig.1E);
6. From the rear of the appliances, insert the coupling plate (provided) in the side slots on the back panels;
7. Secure the plate with two flat head M5 screws provided (Fig.1F).

E.5.1 Installation On Bridge, Cantilever Frame Or Cement Plinth (depending on the appliance and/or model)

Carefully follow the instructions enclosed with the corresponding accessory. Follow the instructions supplied with the optional product chosen.

E.5.2 Sealing Gaps Between Appliances

Follow the instructions supplied with the optional sealing paste pack.

E.6 Floor fixing (depending on the appliance and/or model)

To avoid accidental tipping of built-in half-module appliances installed separately, fix them to the floor.

The instructions are enclosed with the corresponding accessory (F206136).

E.7 Gas Connections

E.7.1 Introduction

CAUTION

This appliance is arranged and tested to operate with G20 gas 20 mbar (for **AUSTRALIA only**: Natural gas 1.0 kPa or propane 2.65 kPa).

To convert it to another type of gas, follow the instructions in E.7.6 *Conversion to another type of gas* paragraph of this section.

IMPORTANT

For UK only: when the appliance operate with LPG, the addition of an OPSO (Over Pressure Shut-off) valve is recommended upstream of the appliance.

E.7.2 Fume exhaust

- “A1” type appliances have to be positioned under an extraction hood to ensure removal of fumes and steam produced by cooking; (not relevant for Australian standard).

For **AUSTRALIA:** the ventilation must be in accordance with Australian building codes and kitchen exhaust hoods must comply with AS/NZS1668.1 and AS 1668.2.

E.7.3 Before connecting

1. Make sure the appliance is arranged for the type of gas to be used. Otherwise, carefully follow the instructions given in E.7.6 *Conversion to another type of gas* paragraph of this section.
2. Fit a rapid gas shutoff tap/valve ahead of each appliance.
3. Install the tap/valve in an easily accessed place.

4. Clean the pipes to remove any dust, dirt or foreign matter which could block the supply. The gas supply line must ensure the gas flow necessary for full operation of all the appliances connected to the system. A supply line with insufficient flow will affect correct operation of the appliances connected to it.

IMPORTANT

Incorrect levelling of the appliance can affect combustion and cause malfunctioning.

E.7.4 Connection (depending on the appliance and/or model)

Monoblock models

1. See the installation diagram for the position of the gas connection on the bottom of the appliance.
2. Remove the plastic cap protection (if present) from the gas manifold before connecting.

Countertop models (if present, only for N9E range)

1. See the installation diagram for the position of the gas connection on the bottom of the appliance.
2. Remove the plastic cap protection (if present) from the gas manifold before connecting.
3. Countertop models can be connected to the gas supply also using the rear connection:
 - a. operate at the back appliance;
 - b. unscrew the metal closing plug of the rear connection;

- c. screw it tightly onto the bottom connection.

After installation, use soapy water to check connections for leaks.

NOTE!

Only for Australia: The gas connection is male 1/2 BSP.

E.7.5 Gas pressure regulator

The section of the gas supply line must be sufficient to ensure the gas flow necessary for full operation of all the appliances connected to the system.

If the gas pressure is higher than that specified or is difficult to regulate (not stable), install a gas pressure regulator (accessory code 927225) in an easily accessed position ahead of the appliance.

The pressure regulator should preferably be fitted horizontally, to ensure the right outlet pressure.

The arrow on the regulator indicates the gas flow direction.

- | | |
|---|---|
| 1 | connection side gas from mains |
| 2 | pressure regulator |
| 3 | connection side gas towards the appliance |

AUSTRALIA: the gas pressure regulator supplied with the appliance must be fitted to the appliance inlet.

Adjust the test point pressure with one burner operating at maximum setting as follow:

- 1.0 KPa for Natural gas
- 2.65 KPa for Propane gas.

E.7.6 Conversion to another type of gas

Nozzle Table “B” (see Appendix) gives the type of nozzles to be used when replacing those installed by the manufacturer (the number is engraved on the nozzle body).

At the end of the procedure, carry out the following check-list:

1. burner nozzle/s replacement
2. correct adjustment of primary air supply to burner/s
3. pilot nozzle/s replacement
4. minimum flame screw/s replacement
5. correct adjustment pilot/s if necessary

6. correct adjustment of supply pressure (see technical data/gas nozzles table)
7. apply sticker (supplied) with data of new gas type used

E.8 Gas appliances regulations

E.8.1 Supply pressure checking

Valve, 7L fryers – Fig. 1

Valve, 15L fryers – Fig. 2

Make sure the appliance is suitable for the type of gas available, according to that given on the dataplate (otherwise, follow the instructions given in E.7.6 *Conversion to another type of gas* paragraph of this section).

The supply pressure must be measured with the appliance operating, using a pressure gauge (min. 0.1 mbar).

See fig. 1 or 2.

1. Remove the control panel and retaining screw "N" from the pressure point;
2. Connect a manometer to the pressure point "N";
3. Compare the value read on the manometer with that given in Table "B" (see Appendix);

If the manometer gives a reading outside the range of values in Table "B" (see Appendix), do not switch the appliance on, consult the gas company.

E.8.2 Gas valve outlet pressure adjustment (15L fryers)

See fig. 2.

1. Remove the retaining screw from pressure point "B" and connect a manometer;
2. Feed the appliance with the correct nominal gas pressure as specified in the paragraph E.8.1 *Supply pressure checking*.
3. Start the fryer as indicated in the chapter G *instruction for the user*.
4. Turn gas valve "D" outlet pressure adjustment screw clockwise to increase the pressure and anticlockwise to

decrease it, adjusting the pressure as specified in the nozzle table "B" (see Appendix).

E.8.3 Primary air checking

Burner – Fig. 4

The primary air is correctly adjusted when the flame does not float with the burner cold and there is no flareback with the burner hot.

See fig. 4.

1. Undo screw "A";
2. Position aerator "E" at distance "H" given in Table "B" (see Appendix);
3. Retighten screw "A";
4. Seal with paint.

E.8.4 Main burner nozzle replacement

See fig. 4.

1. Loosen screw "A";
2. Unscrew nozzle "C" and the aerator "E";
3. Replace nozzle "C" with one suitable for the type of gas, according to that given in table "B" (see Appendix);
The nozzle diameter is given in hundredths of mm on the nozzle body.
4. Insert nozzle "C" into aerator "E";
5. Fit the resulting assembly into its location;
6. Fully retighten nozzle "C".

E.8.5 Pilot burner nozzle replacement (for all versions)

Pilot – Fig. 5

See fig. 5.

1. Undo screw coupling "H";
2. Replace nozzle "G" with one suitable for the type of gas given in table "B" (see Appendix);
The nozzle identification number is indicated on nozzle body;

- Retighten screw coupling "H".

E.9 Before completing the installation operations

- Use soapy water to check all gas connections for leaks.
- DO NOT use an open flame to check for gas leaks.
- Light all the burners separately and also together, to check correct operation of the gas valves, rings and lighting.
- For each burner, adjust the flame regulator to the lowest setting, individually and together.
- After completing the operations, the installer must instruct the user on the correct method of use.

If the appliance does not work properly after carrying out all the checks, contact the local Customer Care service centre.

E.10 Replacing the adjustment spring of the pressure regulator (Only for Australia)

To replace the spring "D" of the pressure regulator with one suitable for the gas pressure type indicated in table "B" (see Appendix) proceed as follows:

- Remove the seal cap "A", the seal cap gasket "B", the adjusting screw "C" and the spring "D" (see image);
- Insert the new spring (blue colour = propane gas; silver colour = natural gas) and replace the adjusting screw;
- Connect a pressure gauge to the appliance's test point pressure – (see paragraph E.8.1 *Supply pressure checking*);
- Ignite the appliance's burners so to have the maximum gas consumption;
- Regulate the adjustment screw until the pressure gauge shows the working pressure value (see paragraph E.7.5 *Gas pressure regulator*);
- Replace the seal cap and gasket and screw tightly closed;
- Remove the pressure gauge and close the test point pressure;
- Prior to operation, test the gas pressure regulator for leaks.

E.11 Electrical connection

WARNING

Work on the electrical systems must only be carried out by specialised personnel.

Before connecting, make sure that:

- the mains voltage and frequency match those indicated on the appliance data plate;
- there is an efficient earth contact;
- the power supply is arranged and able to take the actual current absorption and that it is correctly executed according to the regulations and provisions in force in the country of use.

- a differential thermal-magnetic switch suitable for the input specified on the dataplate, with contact gap enabling complete disconnection in category III overvoltage conditions and complying with the regulations in force, is installed between the power cable and the electric line.

For the correct size of the switch, refer to the absorbed current specified on the appliance dataplate.

E.11.1 Electrical appliances

To access the terminal block:

- Unscrew the drain valves (see Fig. 6);

NOTE!

To unscrew the valves hold the pipe with a special tool to prevent its rotation and possible damage.

- Undo the fixing screws and remove the front panel (see Fig. 7);
- Connect the power cable to the terminal block "M" as shown in the wiring diagram attached to the appliance;
- Secure the power cable with the cable clamp.

IMPORTANT

The manufacturer declines any liability if the safety regulations are not respected.

E.12 Power cable

Unless otherwise specified, our appliances are not equipped with a power cable.

The installer must use a flexible cable having characteristics not lower than the H07RN-F rubber insulated type.

Protect the section of cable outside the appliance with a metal or rigid plastic tube.

WARNING

If the power cable is damaged, it must be replaced by the after-sales service or in any case by qualified personnel, in order to prevent any risk.

WARNING

The manufacturer declines any liability for damage or injury resulting from breach of the above rules or non-compliance with the electric safety regulation in force in the country where the machine is used.

E.13 Circuit breaker

Verify that a safety circuit breaker is installed between the power cable of the appliance and the mains electric line.

The contact opening max. distance and leakage current must comply with the local safety regulations.

E.14 Equipotential node and Earth connection

Connect the appliance to an earth; it must be included in an equipotential node by means of the screw located under the frame.

The screw is marked with the symbol .

E.15 Safety thermostat

Appliances equipped with safety thermostat (overheating safety thermostat) that trips off automatically when temperatures exceed a set value, shutting off the gas supply (gas appliances) or the electricity (electric appliances).

IMPORTANT

Resetting of the safety thermostat must be carried out by specialised personnel; contact the Customer Care.

IMPORTANT

“Positive trip“ effect of the safety thermostat (used on some equipment type as per norms prescriptions) interrupts the unit operability (heating) even in case the capillary is cut.

Similar effect, but with no damage for the safety thermostat, can happen if the appliance body temperature drops below -10°C: in such cases, it is required to reset the safety thermostat while installing the appliance, hence before connecting it to the mains.

IMPORTANT

On electric heated appliance, only reset safety thermostat after disconnecting from the mains. Failure to disconnect from the mains causes the safety thermostat to brake and the unskilled person to risk electrocution.

Tampering with the safety thermostat invalidates the original manufacturer warranty.

E.16 Fuse replacement

The electrical system protection fuse is located inside the panel. To replace the fuse simply remove it from the terminal block.

F NORMAL APPLIANCE USE

WARNING

Refer to “*WARNING AND Safety Information*“.

F.1 Characteristics of personnel enabled to operate on the appliance

The Customer must make sure the personnel for normal appliance use are adequately trained and skilled in their duties. The operator must:

- read and understand the manual;
- receive adequate training and instruction for their duties in order to operate safely;
- receive specific training for correct appliance use.

IMPORTANT

The Customer must make sure his personnel have understood the instructions received and in particular those regarding work hygiene and safety in use of the appliance.

F.2 Basic requirements for appliance use

- Knowledge of the technology and specific experience in operating the appliance.
- Adequate general basic education and technical knowledge for reading and understanding the contents of the manual, including correct interpretation of the drawings, signs and pictograms.
- Sufficient technical knowledge for safely performing his duties as specified in the manual.
- Knowledge of the regulations on work hygiene and safety.

G INSTRUCTION FOR THE USER

G.1 Fryer use

DANGER

Do not use exhausted oil or fat cause due to a low flash point and easily reach boiling point.

General precautions

- This appliance must only be used for its expressly designed purpose; i.e. for frying foods in oil or solid fat; any other use is to be considered improper.
 - Before introducing oil in the tank, make sure it does not contain water;
 - Pour the oil in the tank up to the maximum level indicated by the special reference notch situated on the rear wall of the tank;
 - When using solid fat, melt the fat separately and then pour in the tank; do not leave fat in the tank at the end of cooking;
 - Particularly bulky and wet foods can cause sprays of hot oil.
 - Place the basket with food to be cooked, slowly in the boiling oil, making sure that the froth formed does not spill over the edge of the tank;
- If this occurs, stop dipping the basket for a few seconds.

CAUTION

Top-up the oil bath whenever it falls below the minimum level, marked by the special reference notch (danger of fire).

The oil bath must be changed regularly, because when used several times it becomes dirty and has a lower flashpoint and an increased tendency to suddenly boil.

CAUTION

Tank emptying must be done when the oil is <70 °C cold.

CAUTION

Do not use the appliance when empty or in conditions that compromise its optimum efficiency;

FRYER TEMPERATURE SETTING	
Type of frying	Set the temperature to:
Foods that do not disperse pollutant substances in the oil	180°C / 185°C

Breaded foods	175°C / 180°C
Floured foods	170°C

NOTE!

For cooking food dipped in flour, set the temperature to 170 °C.
A higher temperature doesn't improve the cooking results, but cause faster deterioration of the oil (the residual flour in the oil tends to burn).

IMPORTANT

During cooking, manually remove any cooking residuals in the oil.
The prolonged presence of these residuals alters the taste and fragrance of the oil, reducing its useful life.
For a quick and good measurement of the degree of oil deterioration, use litmus paper (strips) available on the market.

G.2 Basket capacity

Factory Model	Tank capacity	Basket capacity	
	Lt	Fresh potatoes	Frozen potatoes
		Kg	
+7FRGD1B00 +7FRGD1BF0 +7FRED1B00 +7FRED1BF0 +7FRED120N	7	1	1
+7FRGH2B00 +7FRGH2BF0 +7FRED2B00 +7FRED2BF0 +7FRED22FN	7 + 7	1 + 1	1 + 1
+7FRGD1GF0 +7FRED1GF0 +7FRED1GFP	15	2	1.5
+7FRGH2GF0 +7FRED2GF0	15 + 15	2 + 2	1.5 + 1.5
+7FRED2A0N +7FRED2A00	5+5	0.9 + 0.9	0.9 + 0.9
+7FRED1E0N +7FRED1E00	12	2	1.5
+7FRED2E0N +7FRED2E00	12+12	2 + 2	1.5 + 1.5
+7FRED1FF0 +7FRMD1FF5	14	2	1.5
+7FRED2FFN +7FRED2FF0 +7FRMH2FF5	14+14	2 + 2	1.5 + 1.5

G.3 Gas models

7 litres

Fig. 8

The control knob "A" have the following positions:

- "Off"
- ★ "Pilot ignition"
- 110 "Minimum temperature"
- 125...180 "Medium temperature with energy positions range between 125 and 180"
- 190: "Maximum temperature"

The igniter button "B" has following symbol (see Fig. 8):

- ⚡ "Lightning On"

Lightning on

See Fig. 8.

- Press and turn knob "A" to "pilot ignition", at the same time press piezoelectric igniter button "B" repeatedly.
- On releasing knob "A", the flame must remain alight, otherwise repeat the operation. In case of emergency, the pilot can also be lit manually by bringing a flame to it through the hole on the control panel, and keeping knob "A" pressed in the "pilot ignition" position for the time necessary.
- Turn knob "A" to the required temperature. The burners light up and heating starts.
- When the oil in the tank reaches the set temperature, the main burners go off and light up again when the temperature falls below the same value.
- Place the basket with food to be cooked, slowly in the boiling oil, making sure that the froth formed does not spill over the edge of the tank. If this occurs, stop dipping the basket for a few seconds.

Switching off

See Fig. 8.

1. To switch off the main burners, turn knob "A" to the "pilot ignition" position.
2. To switch off the pilot flame, press and turn knob "A" to "Off" position.

At the end of service

- Close the gas shut-off tap.

15 Litres

The thermostatic valve control knobs “M” have the following positions:

●	“Off”
★	“Pilot ignition”
🔥	“On”

The adjusting knob “N” select the required temperature and has the following positions:

110:	“Minimum temperature”
120...180:	“Medium temperatures with positions range between 120°C and 180°C”
190:	“Maximum temperature”

Lightning on

See Fig. 9.

1. Press knob “M” lightly and turn it a few degrees anticlockwise to release it.
2. Press down fully and turn it to “pilot ignition”; a click will indicate sparking.
3. Keep knob “M” pressed in that position for about 15-20 seconds to allow gas to reach the pilot burner and the thermocouple to heat up.
4. With the pilot lit, turn knob “M” to “On” to light it.
5. Then use “N” to select the required temperature.

Switching off

See Fig. 9.

1. Turn knob “M” to “pilot ignition”, to turn off the main burner.
2. To switch off the pilot burner, turn knob “M” to “Off” position.

G.4 15 Litres gas models

The thermostatic valve control knobs “M” have the following positions (see Fig. 9):

●	“Off”
★	“Pilot ignition”
🔥	“On”

The adjusting knob “N” select the required temperature and has the following positions (see Fig. 9):

110:	“Minimum temperature”
120...180:	“Medium temperatures with positions range between 120°C and 180°C”
190:	“Maximum temperature”

G.4.1 Lightning on

- Press knob “M” lightly and turn it a few degrees anticlockwise to release it.
- Press down fully and turn it to “pilot ignition”; a click will indicate sparking.
- Keep knob “M” pressed in that position for about 15-20 seconds to allow gas to reach the pilot burner and the thermocouple to heat up.
- With the pilot lit, turn knob “M” to “On” to light it.
- Then use “N” to select the required temperature.

G.4.2 Switching off

- Turn knob “M” to “pilot ignition”, to turn off the main burner.
- To switch off the pilot burner, turn knob “M” to “Off” position.

G.5 Interlock

The valve features a thermal re-light locking device enabled until the thermocouple is hot.

Such device, called interlock, keeps engaged for about 40 seconds in case of accidental pilot flame shut off, hence allowing accumulated gas to flow out through the chimney prior to light any spark again.

Forcing the interlock leads to a valve damage which is not covered by the original manufacturer warranty.

G.6 Electrical models

The adjusting knob "B" select the required temperature and has the following positions (see Fig. 10):

0:	"Off"
95:	"Minimum temperature"
105...175:	"Medium temperatures with positions range between 105°C and 175°C"
185:	"Maximum temperature"

The green indicator "B" signals that the power is on.

The yellow indicator "C" signals that the heating elements are on.

G.6.1 Switching on

Turn on the main switch located ahead of the appliance.

- Turn the knob of thermostat "A" to the value corresponding to the required cooking temperature.
- Lighting up of green indicator "B" signals that the power is on.

Lighting up of yellow indicator "C" signals that the heating elements are on; it goes off when the set temperature is reached.

IMPORTANT

When using a fryer with heating elements inside the tank, pay particular attention when handling them, using the special support bracket "D".

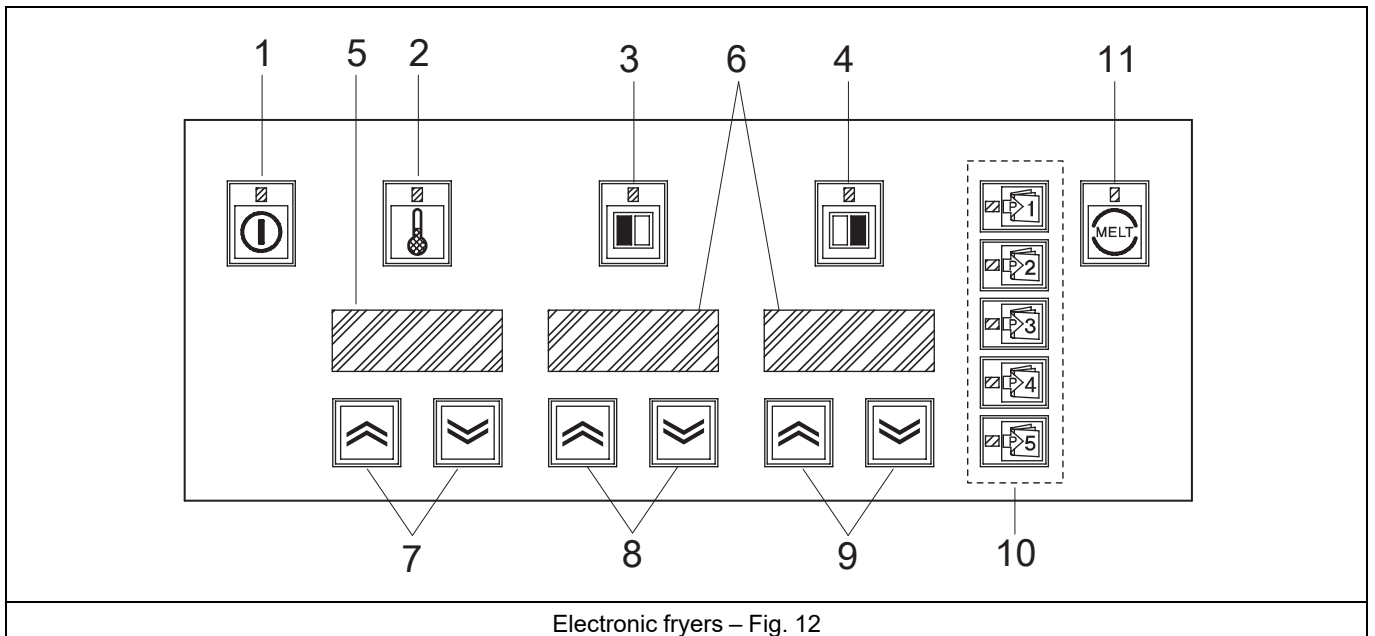

For greater safety, a microswitch cuts off the power when the heating elements "E" are raised.

G.6.2 Switching off

- Turn the knob of thermostat "A" anticlockwise to position "Off".

G.7 Electric model with electronic control

The control panel has following symbols (see Fig. 12):

1	ON/OFF button
2	temperature setting key
3	left basket programme start key
4	right basket programme start key
5	temperature (work and set) display
6	programme (left and right) time displays
7	temperature setting (up / down)
8	left basket programme time setting (up / down)
9	right basket programme time setting (up / down)

10	stored (or storable) programme keys
11	key for "melting" cycle (Off/On: the melting cycle begins at swicht-on if the temperature recorded by the work thermostat is below 70°C)

Switching off: press button "1".

G.7.1 Temperature setting

- Display "5" shows the set temperature for cooking. To display the actual temperature of the oil in the tank for a few seconds, briefly press key "2".
- Press keys "7" to increase/decrease the set value. The display has a sensitivity of $\pm 1^\circ\text{C}$ (keeping key "7" pressed, the temperature setting changes faster). After setting, display "5" flashes for 3 seconds, then the temperature indicated will be stored.
- If the LED of key "2" is:
 - RED: the temperature of the oil has still not reached the set temperature.
 - GREEN: the oil has reached the set temperature. Cooking can begin.

G.7.2 Cooking time setting

- Displays "6" show the set cooking time.
- Press keys "8"/"9" to increase/decrease the set value: the display has a sensitivity of ± 5 s and allows a minimum time of 00:30s. (keeping keys "8"/"9" pressed, the set time changes faster).
- After setting, display "6" flashes for a few seconds, then the value indicated will be stored.
- Press keys "3"/"4" to start lowering the left/right lifter: the corresponding display "6" (left or right) will start the set time count-down. On reaching the value 00:00, the cycle ends with the lifter coming out of the oil bath and the display gives the value initially set.

G.7.3 Programming

5 different cooking programmes (keys "10") can be stored: the desired cooking temperature and, depending on the version, 1 or 2 cooking times can be stored in each programme (in the "full optional" versions there are the times of the two baskets R. H./L.H.).

To store a programme, enter the desired values and press one of the keys p1... p5 until an acoustic signal indicates storage. Carry out the same procedure to store other cooking programmes.

NOTE!

At the time of installation no programmes are stored and each subsequent storage cancels the pre-existing programme.

G.7.4 Programming block

The keypad can be blocked, enabling use of only the previously stored programmes.

To enable/disable this option:

- After switching on the appliance, press the key "7". FAST (Fast Food) will appear on the display;
- Press key "2": if Y (Yes) appears on the display keys "7", "8" and "9" are blocked; if n (no) appears keys "7", "8" and "9" are activated;
- Press keys "7" to change the parameter (Y/n). Press key "2" to store;
- To quit the Fast Food menu, press keys "3" and "4" together.

G.7.5 Using a set programme

- Press one of the keys "10" for the programme, displays "5" and "6" show the stored settings;
- Press key "3" or "4" to start cooking.

G.8 Draining oil

Fig. 13

Fig. 14

Emptying the tanks should be done at cold oil;

Built-in versions

See Fig. 13.

1. Switch the fryer off;
Pay maximum attention to avoid coming into contact with the hot oil;
2. Open the drain tap, slowly turning the knob "A" anticlockwise;

Counter Top versions

See Fig. 14.

1. Switch the fryer off;
Pay maximum attention to avoid coming into contact with the hot oil;
2. Position a bowl for collecting the oil at the drain valve "B"
3. Press and slowly turn the knob "A" clockwise to discharge the oil;

G.8.1 At the end of work

- Close the drain tap by turning the knob.

NOTE!

For better appliance performance, regularly change the oil. Overusing an oil reduces its flashpoint and increases its tendency to boil suddenly.

H APPLIANCE CLEANING AND MAINTENANCE

WARNING

Refer to “*WARNING AND Safety Information*”.

H.1 Care information

Care operations have to be carried out by the owner and/or user of the appliance.

IMPORTANT

Problems resulting from poor or lack of care as hereinafter described will not be covered by the warranty.

H.2 Cleaning introduction

In order to reduce the environmental impact of pollutants it is advisable to clean the appliance (externally and, where necessary, internally) with products that are more than 90% biodegradable.

Use lukewarm water, a neutral detergent/cleaner if necessary, and a soft brush or sponge. If another type of detergent is used, carefully follow the producer's instructions and observe the safety rules given in the information sheets provided with the product or substance.

Rinse and dry thoroughly.

H.3 Maintenance intervals

It is advisable to carry out the checks with the frequency given in the following table:

Maintenance, inspections, checks and cleaning	Frequency	Responsibility
Ordinary cleaning <ul style="list-style-type: none"> general cleaning of appliance and surrounding area 	<ul style="list-style-type: none"> Daily 	<ul style="list-style-type: none"> Operator
Mechanical protection devices <ul style="list-style-type: none"> check their condition and for any deformation, loosening or removed parts 	<ul style="list-style-type: none"> Every 6 months 	<ul style="list-style-type: none"> Service
Control <ul style="list-style-type: none"> check the mechanical parts, for cracks or deformations, tightening of screws: check the readability and condition of words, stickers and symbols and restore if necessary 	<ul style="list-style-type: none"> Yearly 	<ul style="list-style-type: none"> Service
Appliance structure <ul style="list-style-type: none"> tightening of main bolts (screws, fixing systems, etc.) of appliance 	<ul style="list-style-type: none"> Yearly 	<ul style="list-style-type: none"> Service
Safety signs <ul style="list-style-type: none"> check the readability and condition of safety signs 	<ul style="list-style-type: none"> Yearly 	<ul style="list-style-type: none"> Service
Electrical control panel <ul style="list-style-type: none"> check the electrical components installed inside the electrical control panel. Check the wiring between the electrical panel and appliance parts 	<ul style="list-style-type: none"> Yearly 	<ul style="list-style-type: none"> Service
Electrical connection cable <ul style="list-style-type: none"> check the connection cable (replace if necessary) 	<ul style="list-style-type: none"> Yearly 	<ul style="list-style-type: none"> Service
General appliance overhaul <ul style="list-style-type: none"> check all components, electrical equipment, corrosion, pipes... 	<ul style="list-style-type: none"> Every 10 years¹ 	<ul style="list-style-type: none"> Service

1. The appliance is designed and built for a duration of about 10 years. After this period of time (from commissioning) the appliance must undergo a general inspection and overhaul.

CAUTION

- Do not use solvent-based detergents (e. g. trichloro-ethylene) or abrasive powders for cleaning.
- Do not use steel brushes, steel wool, copper cloths, sand-based or similar products for cleaning.

Accessories such as baskets and containers, if present, must be cleaned outside of the appliance.

WARNING

When using chemicals, comply with the safety notes and dosage recommendations printed on the packaging. Refer to the chapter *A.2 Personal protection equipment* for handling chemical products.

H.4 Periods of non-use

If the appliance is not going to be used for some time, take the following precautions:

- close the water supply tap(s), if present;
- close the gas valves;
- disconnect the power supply or remove the plug from the power socket, if present;
- clean the cabinet, going over all the stainless steel surfaces vigorously with a rag moistened with paraffin oil to create a protective film;
- leave the door or drawers, if present, open so that air can circulate inside, preventing the formation of unpleasant odours;
- for the electric heated models: switch on the appliance at the minimum rate of heat for at least 45 minutes; this will allow moisture/humidity accumulated into the heating elements to evaporate without damaging the elements;
- periodically air the premises.

H.5 External parts

SATIN-FINISH STEEL SURFACES (daily)

- Clean all steel surfaces: dirt is easily removed when it has just formed.
- Remove grime, fat and other cooking residuals from steel surfaces when cool using soapy water, with or without detergent, and a cloth or sponge.
Dry the surfaces thoroughly after cleaning.
- In case of encrusted grime, fat or food residuals, go over with a cloth or sponge, wipe in the direction of the satin finish and rinse often:
Rubbing in a circular motion combined with the particles of dirt on the cloth/sponge could spoil the steel's satin finish.
- Metal objects can spoil or damage the steel: damaged surfaces become dirty more easily and are more subject to corrosion.
- Restore the satin finish if necessary.

SURFACES BLACKENED BY HEAT (when necessary)

- Exposure to high temperatures can cause the formation of dark marks.
These do not constitute damage and can be removed by following the instructions given in the previous section.

H.6 Other surfaces

Heated tanks/containers (daily)

- Clean the appliance tanks or containers using boiled water, adding soda (degreasing) if necessary.
- Use the accessories (optional or supplied) specified in the list to eliminate encrustations or food deposits.

WARNING

With electrical equipment, make sure no water comes into contact with electrical components: water entering can cause short circuiting and dissipation, tripping the appliance's protection devices.

H.10 Maintenance contacts (only for Australia)

For service and spare parts, please contact:

- Electrolux Professional Australia PTY LTD - Suite 304, 44 Lakeview Drive Scoresby, VIC 3179. PHONE: 1300 368 299
- Zanussi - Luus Industries - 250 Fairbairn Rd, Sunshine West Victoria, 3020 - Call (03) 9240 6822 - Website: www.luus.com.au

Tanks and collection drawers (even several times a day)

- Remove any grease, oil, food residuals, etc., from trays, drawers and containers in general used for collection. Always clean these containers at the end of the day.
- While using the appliance, empty them when they are nearly full.

H.7 Cleaning filters

Use of filters for oil increases the life of the oil, and in case of reuse guarantees better cooking of food.

To clean:

- Remove the filter from its seat;
- If the filter is dirty with grease, wash it with degreasing soap, then rinse and dry;
- At the end of the operation, refit the filter in its seat;
- Replace the filter if deteriorated.

H.8 Cleaning fryers with internal heating elements

Clean the tank, operating as follows:

- wait until the appliance has cooled;
- drain the oil from the tank by means of the special tap.
- lift the heating element unit "A" (see figure below) by means of support bracket "B".
- tilt the support bracket and place it in the tank expansion zone "C". In this position the power to the heating element unit is cut off by a microswitch.

- Carefully clean the tank and heating elements, taking particular care with the latter so as not to damage the appliance.

H.9 Internal parts (every 6 months)

IMPORTANT

Operations to be carried out only by specialised personnel.

- Check the condition of the internal parts.
- Remove any deposits of dirt inside the appliance.
- Check and clean the discharge system.

IMPORTANT

In particular conditions (e.g. intensive use of the appliance, salty environment, etc.) the above cleaning should be more frequent.

I TROUBLESHOOTING

I.1 Introduction

Certain faults may occur during normal use of the appliance. In some cases, faults can be eliminated easily and quickly by following the indication below.

If the fault persists, contact the Customer Care Service:

1. Disconnect the appliance from the main power supply;
2. Switch off the safety circuit breaker ahead of the appliance;
3. Close the gas and water tap(s), if they are present;

4. Remember to specify:

- the type of fault
- the appliance PNC (product number code)
- the Ser. No. (appliance serial number).

IMPORTANT

The appliance PNC and serial number are essential for identifying the type of appliance and date of manufacture.

I.2 Brief Troubleshooting guide (gas models)

Malfunction.	Possible causes	Actions
The pilot burner does not light	<ul style="list-style-type: none"> • The igniter is not properly fixed or connected. • The electric ignition or igniter cable are damaged. • Insufficient pressure in gas pipes. • Blocked nozzle. • Faulty gas valve. 	<ul style="list-style-type: none"> • Call Service. • Switch on the Pilot Burner with an external flame / Contact service • Check the gas connection and verify the gas supply • Call service. • Call service.
The pilot burner goes out when the ignition knob is released	<ul style="list-style-type: none"> • Flame failure device not properly activated (Ignition Knob pressure). • Safety thermostat cut in or in faulty. • The pilot burner is not heating the thermocouple sufficiently. • The thermocouple is not properly connected or the safety thermostat cables are disconnected. 	<ul style="list-style-type: none"> • Call service. • Call service. • Call service.
The pilot burner is still lit but the main burner does not light	<ul style="list-style-type: none"> • Work thermostat not fed. • Work thermostat wires disconnected. • Insufficient pressure in gas pipes. • Blocked nozzle. • Faulty gas valve. • Faulty work thermostat. 	<ul style="list-style-type: none"> • Call service. • Call service. • Follow lightning procedure and remember to press the ignition Knob pressure • Call service. • Call service. • Call service.
Problem with temperature setting	<ul style="list-style-type: none"> • Oil deterioration • Tank poor cleaning • The thermostat bulb damaged. • Faulty thermostat. 	<ul style="list-style-type: none"> • If oil is deteriorated replace it • If dirty tank clean it especially in the area around the bulb. • Call service. • Call service.

J APPLIANCE DISPOSAL

WARNING

Refer to “*WARNING AND Safety Information*”.

J.1 Procedure regarding appliance disposal

At the end of the product's life-cycle, make sure it is not dispersed in the environment.

Different regulations are in force in the various countries, therefore comply with the provisions of the laws and competent bodies in the country where appliance disposal takes place.

The appliance's parts must be disposed of in a differentiated way, according to their different characteristics (e. g. metals, oils, greases, plastic, rubber, etc.).

Before disposing of the appliance, make sure to carefully check its physical condition, and in particular any parts of the structure that can give or break during dismantling.

Depending on the model, the doors must be removed before dismantling the appliance.

The symbol on the product indicates that this product should not be treated as domestic waste, but must be correctly disposed of in order to prevent any negative consequences for the environment and human health. For further information on the recycling of this product, contact the local dealer or agent, the Customer Care service or the local body responsible for waste disposal.

NOTE!

When dismantling the appliance, any marking, this manual and other documents concerning the appliance must be destroyed.

CE
